Full-Stack Software Engineer who thrives on solving complex technical challenges. Currently building SaaS ERP systems for the pharmaceutical sector, with expertise in system optimization and translating intricate concepts into maintainable solutions. Driven by a passion for learning new technologies and applying them effectively, eager to contribute to a collaborative team delivering scalable, high-impact software.

Skills

Languages: C#, Typescript, Python, T-SQL, HTML, CSS, C, Java
Frameworks/Libraries: .NET, React, Cypress, Tailwind, Flask

Cloud/Devops: Azure, Azure DevOps, Docker, Git, AWS
Databases: SQL Server, SSIS, SQLite, Neo4j

Experience

Novo Nordisk Engineering

Oct 2023 – Present

Advanced System Developer

Copenhagen, Denmark

- Led a 4-person team to redesign a full-stack application (React, .NET, Azure, SQL Server), reducing technical debt by 85% and improving page load times from minutes to under 2 seconds through API optimisation and cross-page data caching. Conducted hiring interviews and mentored new developers.
- Championed automated build validation pipelines with security gates for 10+ applications, directly contributing to NNE achieving ISO 27001 certification for software development (SDLC).
- Architected CI/CD pipelines enabling Git workflows on heavily customised third-party software, eliminating 100% of manual deployment steps and reducing deployment duration from days to hours.
- Resolved critical data warehouse incidents by redesigning sync processes with delta loads and monitoring, achieving 99.999% uptime and eliminating system-locking scheduled tasks.
- Designed ETL pipelines processing 500K+ daily records with self-healing schema adaptation, reducing data transformation execution time by 95% and eliminating production database load.

Bank of America

Jul 2023 - Oct 2023

Software Engineer

Dublin, Ireland

- Collaborated with technical leads and business analysts on a high-risk team to design and implement cross-project database integrations on IBM db2 and Python.

Huawei Ireland Research Center

Jan 2023 - Jul 2023

Software Engineer

Dublin, Ireland

- Contributed to the development of a high-performance, low-level load balancer using DPDK.

Trellix

Jan 2022 - Sep 2022

Software Engineer

Cork, Ireland

- Migrated an on-premise frontend and backend application to AWS cloud-native architecture, improving scalability and maintainability.

Stripe via Telus International

Jul 2018- Dec 2021

Software Engineer

Cork, Ireland

- Provided technical support for payment integration, assisting developers and merchants with API implementation.

Education

Munster Technological University

Sep 2019 – May 2023

Bachelor of Science (Honours) in Software Development

Cork, Ireland

1st, 2nd, 3rd, 4th Year - First-Class Honours (equivalent grade 12 - 3.9 GPA)

Honors

- Alejandro de la Flor Trellix Scholarship – 2021/2022

Projects

Cyli

Dec 2025

Python, Cypress, uv

- A CLI tool for managing and running Cypress tests with ease. Helps you discover, select, and run Cypress component and E2E tests from any project directory directly from your terminal.
